

Introduction to Programming

More Practice Programs: C (Sudeep K S, Mahindra University / August 2026)

1. Write a program to read a real number a and check if it is even. If yes, print “yes” and if not, print “no”.
2. Write a program to read two integer numbers and check if the first number (a) is divisible by the second number (b). If yes, print “yes, <value of a > divides <value of b >” and if not, print “no, <value of a > does not divide <value of b >”.
3. Write a program that reads three integers a , b and c ; and checks if a divided by b gives c as the remainder. If yes, print “yes” and if not, print “no”.
4. Write a program to read three real numbers a , b and c ; and print $b^2 - 4ac$.

Advanced (for those who are familiar with C programming)

1. Write a program to read an integer a and check if it is a prime number.
2. Write a program to read two numbers and find their greatest common divisor.
