

Practice for Minor 1

Sudeep K S, September 2026

1. See the program below. What will be values that get printed? (Answer it first without running the program, so that you understand the operations properly. Run to verify your answers).

```
#include <stdio.h>
#include <stdbool.h>

int main()
{
    int a, b, c;
    bool flag;

    a = 10; b = 5;

    // arithmetic operations
    a = a + b;
    printf("a is: %d\n", a);
    a += 6;
    printf("a is: %d\n", a);
    a /= 7;
    printf("a is: %d\n", a);
    a--;
    printf("a is: %d\n", a);

    // logical operations
    flag = a > b || b / a;
    printf("flag is: %d\n", flag);
    flag = a < b && a / b;
    printf("flag is: %d\n", flag);

    // bitwise operations
    c = a & b;
    printf("c is: %d\n", c);
    c = a | b;
    printf("c is: %d\n", c);

    return 0;
}
```

2. Write a program to read two numbers and check if the absolute difference is more than 5. If the absolute difference is more than 5, print “yes”; else print “no”.
